

Bongo Battery tray

Start by removing the small nut from the heater mounting bracket, fit the battery tray support as shown, use a bolt and washer from the kit to fix the lower part of the support to the rear most hole in the chassis leg.

Lower the battery tray into position and check alignment of all mounting holes, the battery tray support can be adjusted slightly if required, and fix using four bolts and washers.

Remove the bolt from the header tank and replace with the short length of steel rod and nut as shown. The long length of rod can now be fitted to the threaded hole in the battery tray and locked in place with a nut and washer.

Fit the battery and secure with battery clamp and remaining nuts and washers.
